## INTRODUCING A MASSIVE LEAP FORWARD IN RECYCLED COTTON QUALITY

Using the Reclaimist™ process, manufacturing waste is transformed into premium yarns. The resulting Reclaimist™ fabrics represent a leap forward in recycled cotton quality and hand feel. Inspired by this innovation, we built an entire collection crafted from Reclaimist™ recycled cotton.

And this is just the beginning . . .

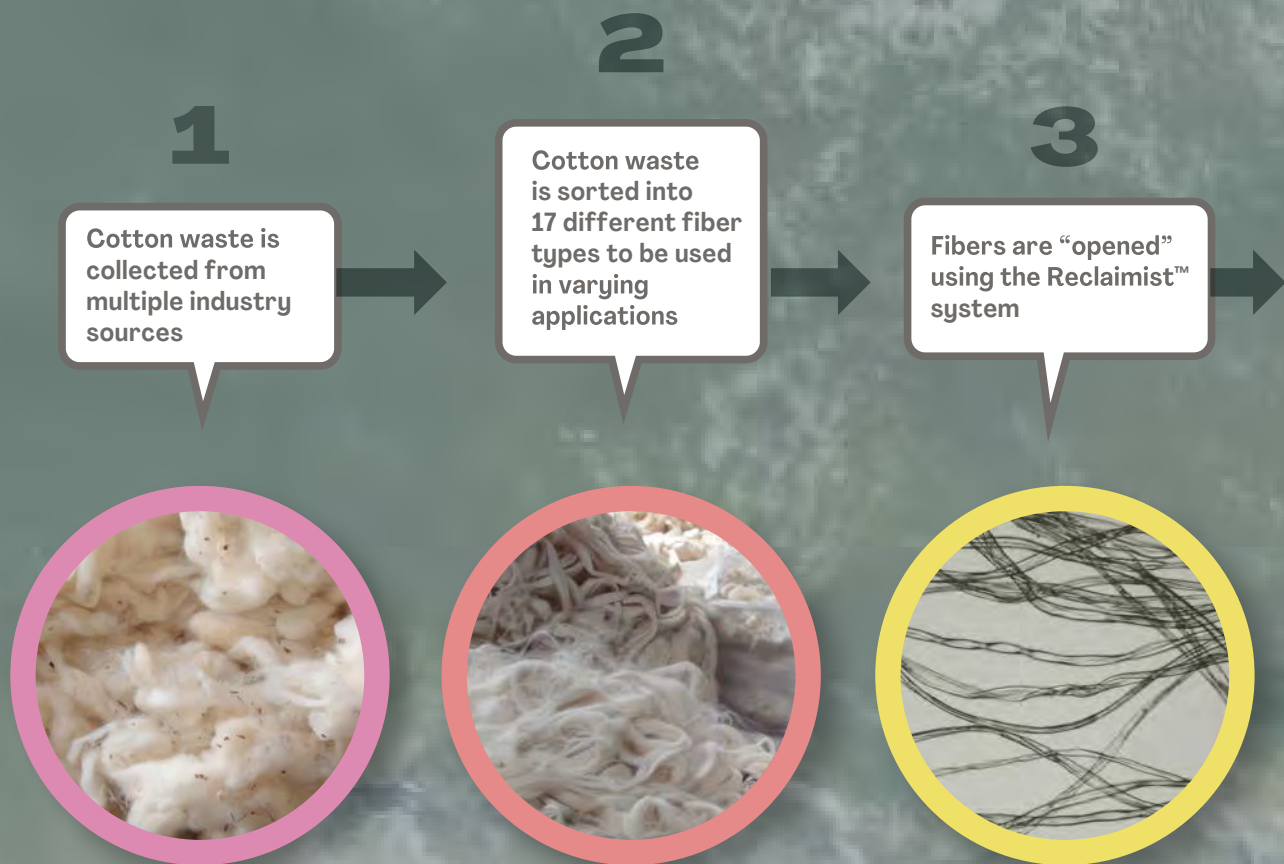

**Reclaimist**™  
Nothing wasted.

## SPREADING THE WORD, SPREADING THE LOVE SINCE 2006

econscious was launched in 2006 because the founders wanted to create the company they wished existed; a brand devoted entirely to sustainable materials, in styles made to last, at fair prices. Today, our commitment to sustainable materials has only grown stronger and more vital.

# Reclaimist™

## A NEW PARADIGM IN RECYCLED COTTON MANUFACTURING

**Reclaimist™** recycled cotton is made using a selection and collection process developed and refined through decades of research and development. Reclaimist recycled cotton uses 17 different types of spinning and cotton processing waste to create proprietary recipes. These unique formulations yield bespoke premium yarns that deliver unparalleled quality.

## Circularity Catalyst

**Reclaimist** recycled cotton is made from waste collected from various stages of the cotton spinning process. The cotton waste is then spun into bespoke yarns using the Reclaimist™ process; increasing the efficiency of the cotton spinning process by 12%.

# Reclaimist™

Nothing wasted.

“I love this beautiful, mysterious, complicated planet we get to call home. I don’t mean any simple, sappy kind of love. I don’t mean anything cute or tame. I mean living, breathing, heart-beating love. Wild love. This love is not a noun, she is an action verb. She can shoot stars into the sky. She can spark a movement. She can sustain a revolution.”

—Mary Annaïse Heglár

ORGANIC MAKES A WORLD OF DIFFERENCE!					
	SEED PREPARATION	SOIL & WATER	WEED CONTROL	PEST CONTROL	HARVESTING
ORGANIC COTTON FIBER Production Processes	use untreated seeds; never use GMO seeds	build strong soil through crop rotation; retain water more efficiently due to increased organic matter in the soil	physical removal rather than chemical destruction; controlled through cultivation and hand hoeing	maintain balance through healthy soil; use beneficial insects, biological and cultural practices; may use trap crops to lure away insects	relies mostly on seasonal freeze for defoliation; may stimulate defoliation through water management
CONVENTIONAL COTTON FIBER Production Processes	typically treat seeds with fungicides or insecticides; use GMO seeds for approximately 70% of US-grown cotton	apply synthetic fertilizers; loss of soil due to predominantly mono-crop culture; require intensive irrigation	apply herbicides to soil to inhibit weed germination; repeatedly use herbicides to kill weeds that do grow	use insecticides heavily, account for ~25% of world consumption; use pesticides, commonly toxic and carcinogenic; frequent use of aerial spraying	defoliates with toxic chemicals

*For thousands of years*

*hemp has been cultivated* for use in textiles and paper because of its strength and ability to grow rapidly in diverse settings. Known for its insulating properties, breathability, shape retention, durability and incredible versatility, hemp has a rich & storied history for a reason. Hemp boasts a long root system that helps prevent soil erosion and broad leaves that spread out to create a thick canopy that suppresses weed proliferation. One of the strongest fibers around, hemp comes from the same plant species as marijuana but contains minimal amounts of THC and higher concentrations of cannabidiol (CBD). Today, hemp is experiencing a long overdue resurgence and you can be part of that movement with the econscious hemp blend collection.
